

## Fillers

A natural consequence of ageing is the fact that our facial skin loses its elasticity, thickness, hydration, and volume, all of which we need to maintain a youthful and healthy appearance.

At AK Care, Dr Amir uses dermal fillers consisting of HLA (Hyaluronic Acid) to add volume and restore facial contours where the fat volume and skin elasticity has diminished during the aging process.

Dermal fillers are non-surgical and temporary injectables which can deliver a revitalized, refreshed, and younger facial presence. They may also enhance the contour of the lips, offering the much wanted after sensual plump appearance of the lips. They may be injected anywhere on the face. The effect of the filler varies from 6-12 months and in some cases longer depending on treated area, type of filler used and personal variations.
