

Skin Mole Removal

Moles are generally benign lesions that you may wish to remove for cosmetic reasons. They may interfere with wearing eyeglasses or jewellery or may even bleed whenever you shave or touch. The most appropriate removal technique depends upon the type, colour, and location of the mole itself.

Mole removal is a painless procedure that Dr. K conducts under local anesthesia at AK Care. In lots of cases, a biopsy or sampling is done to make sure that the mole is a benign condition and does not require a different treatment.
